## COVID Situation in Uganda

Uganda is having significant problems with Covid cases and unfortunately the lockdown has been reinstated. Hospitals are over capacity and they are quickly running out of oxygen and supplies. The miraculous news is that Pastor Geoffrey was able to receive one of the very few vaccines available in Uganda and he is therefore considered an essential worker. This means that he is able to distribute food to the families of our Acres of Hope students. And while this truckload of eggplant grown in the Acres of Hope gardens is encouraging, it is not nearly enough to feed the 250 families that Acres of Hope cares for.

Once again we must ask for any donation you are able to make to supplement food.

<https://aohi.reachapp.co/projects/a-o-h-i-covid-19-relief-fund>

All donations will go directly to our Acres of Hope families. The

Ugandan Government has indicated that the lockdown will be in effect until 50% of the population is vaccinated. Please pray that the country can find vaccinations for its people.

## Meet Eve, Secondary School Graduate!

Eve is now 17 years old, but lost her parents when she was 4. Fortunately, her aunt was able to care for her and her siblings, one brother and one sister. She says, "I thank God for Acres of Hope and my sponsorship which have allowed me to go to school. I have always had a passion for making friends and Acres of Hope was great for me because my friends would support me and I would support them making the school environment comfortable and a good place to learn." Eve has just graduated from Lakeside school in Kampala and hopes to become an Agriculturalist. Her most fervent wish is to attend Muni University in Arua.
